

Switches for the
**WEARABLE
TECHNOLOGY
AND
HANDHELD
DEVICES
MARKET**

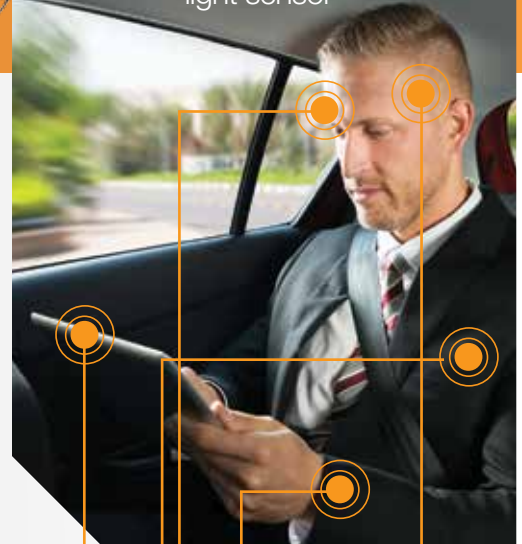

BIG TECH, MINIATURE PACKAGE

Wearable devices can be worn all over the body and each location has a unique set of considerations to optimize for both form and function.

Whether you require a tact switch that is surface mount, right angle actuation, illuminated or even a navigational switch or a detector switch for your application, E-Switch provides a wide range of miniature switches to fit nearly any compact product developed for the wearable and handheld technology market.

Cycling Helmet with directional light sensor

Smart Tablet
Smart Phone

Smart Watch
Smart Glasses

Virtual Reality Headset

An aging population has created a demand for wearable technology by providing real-time measurement and memory of a patient's vital signs. Products designed for the elderly require special switch considerations such as a firm tactile response to know that the product has been turned on or off in order to capture data.

Two decades ago, one computer consumed the space of an entire room. Today, you can conduct many of your business tasks from your wrist. As wearable and handheld devices get smaller in size, it is increasingly important to maximize component functionality.

Hearing Aid

Alert Cuff Bracelet

Armband Tracker for vital signs

Smart Glove Tracking to improve sports performance

Chronic Pain Therapy Device

Smart Patch to help improve range of motion while preventing further injury

SMART GADGETS COME IN MANY FORMS

Besides offering kids and adults endless entertainment with virtual reality video games and helping improve your fitness program with tracking apps, wearable/handheld technology can filter your phone calls, provide personal safety aide, alert you to your baby's vital signs, monitor your home security, release stimuli to manage chronic pain and even track the family dog's whereabouts and his activity level.

Successful wearable applications currently take on seventeen forms: anklet, armband/wristband, belt, bra, bracelet, contact lenses, chest mounted, earring, earpiece, glasses, glove, headphone, head mounted, necklace, ring, shoe and watch.

Wearable technology extends the capabilities of the wearer in a wide range of situations. The wearer wants the wearable or handheld device to be discrete and accessible as though an extension of one's own body. Miniature and micro-miniature switches lend themselves to the compact design of the devices, which contributes to a seamless and positive user experience.

Wearable technology is becoming mainstream for every member of the modern family. Today's wearable product designs utilize miniature tact, navigation and detector switches. Our tact switch line offers a wide variety of dimensions, profiles, actuation heights and styles from surface mount, right angle and illuminated.

► This brochure shows a small sample of wearable/handheld devices applications. Suitable switch style and

APPLICATION & SWITCH MATRIX

The applications listed below are only a small sampling of the many wearable technology and handheld devices available in the marketplace today.
