

LOAD LIFE – TEMPERATURE TABLES

Products: Liquid Electrolyte Aluminium Electrolytic Capacitors

When operating at temperatures less than the rated maximum, use the below table in estimation of load life – endurance performance (Hours) of liquid electrolyte Aluminium Electrolytic Capacitors.

:: Wear-Out Accelerators

Electrical Overstress | Corrosive Agents | Reduced Pressure

:: Load Life Rating Follows Arrhenius Rate Law

Temperature increase of 10°C approximately doubles the rate of the reaction

- + End-seal and electrolyte directly relates to component load life rating
- + In-circuit wear out rate is chiefly dependent upon operating temperature
